LES PETITES HUMANITÉS

Il faut se rendre à l'évidence: il se passe quelque chose de nouveau sous le soleil. Les majestueux processus physiques et chimiques qui organisent le système Terre, la trajectoire évolutive du vivant, la composition des sols, des eaux, tout cela porte désormais la marque des activités humaines. Des indications scientifiques, collectées par une myriade de dispositifs d'observation et de mesure répartis autour de la Terre, nous permettent d'appréhender le rythme du bouleversement en cours.

Nathalie Larmanjat, Foreign Rights Manager

"An indispensable guide to forming an ecologically aware culture and understanding the stakes of our current environmental crisis."

Time to face facts: something new is going on under the sun. The stately physical and chemical processes regulating the Earth, life's evolutionary trajectory, soil composition, water composition – all these now bears traces of human activity. What's new about our current environmental crisis is that we humans aren't the only players with the power to influence history anymore. The consequences of global production menace our lives and social structures, forcing us to rethink our relationship to knowledge, politics, and nature.
