Stargazing with Binoculars

Author: Bertrand d'Armagnac

Publisher : Stelvision

Category : Science, Technology, Medicine

Genres : Physics/Chemistry/Biology

Keywords : Twins - Play - Space - Diversity - Empowerment

Lunar craters, star clusters, nebulae, comets, and even some distant galaxies – all of these can be marveled at with just binoculars and a good guide!

Simpler and more affordable than a telescope, binoculars are ideal for familiarizing yourself with the sky and starting to explore it.

After an introductory chapter on the starry sky and observation equipment, this practical guide offers 35 observation worksheets with detailed location maps and clear explanations. The observations are classified by season of visibility and level of difficulty. They are achievable with almost all binoculars, from any country in the northern hemisphere.

A simple, practical, and inspiring guide!
