This book provides an overview of the way the sector operates, its developments and the challenges it faces, taking a three-pronged approach: economic, systemic and forward-looking.

Air transport has numerous implications in terms of jobs, industrial specialization, competitiveness, research and so on. A long-standing vector of globalization, it now faces the challenges of ecological transition, triggering uncertainty and forcing the industry to reshape itself. This book provides an overview of the analyses prompted by these shifts.
